

GEBERIT BIM PLUG-IN

NEW FUNCTIONS, REVISED FEATURES AND NEW PRODUCTS

RELEASE APRIL 2026

A maintenance update for the Geberit BIM plug-in is now available for download. Plug-in users will be notified by a pop-up message directly in the software that a new version is available.

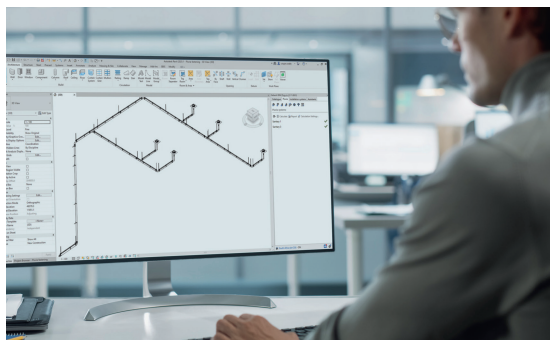

NEWS IN THE CATALOGUE MODULE

You can now these new product in the catalogue:

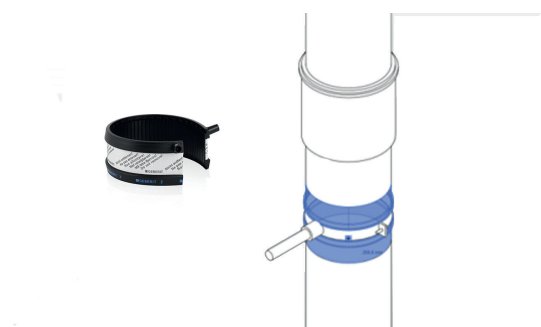

- Geberit CleanLine Assortment
- Geberit CleanFlor30 assortment ·
- Traps for different washbasins and bidets

BOOST EFFICIENCY AND ACCURACY IN YOUR NEXT PLUVIA BIM PROJECT WITH AUTOMATIC FASTENING VISUALIZATION

Instead of placing all fastening points manually, simply click “Calculate” in your next Pluvia project. The plug-in automatically generates and visualizes all required fastening points – fully compliant with Geberit standards and aligned with your project-specific requirements. This ensures precise planning while significantly reducing manual effort for MEP designers.

AUTOMATICALLY DEFINE EXPANSION SOCKETS AND FIX/SLIDING POINTS FOR RELIABLE PLUVIA PIPE INSTALLATION

The Pluvia Assistant automatically calculates all required fixed and sliding fastening points and assigns the appropriate expansion sockets and additional articles (when needed) – fully in line with Geberit standards. Based on the defined fix and sliding points, the Assistant automatically adds all necessary components according to the Geberit ruleset:

Wherever expansion sockets are required, these are placed and visualized automatically.

All elements – fastening points, expansion sockets, and electrofusion components – are fully visualized within the BIM model, ensuring complete transparency and accuracy in your Pluvia project.

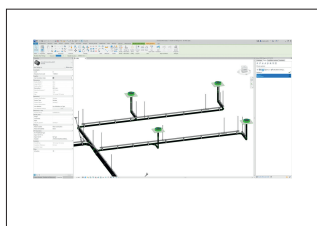

NEWS IN THE PLUVIA MODULE

EASILY INTEGRATE THE GEBERIT PLUVIA SUPPORT SET FOR MORE STABILITY AND SAFETY

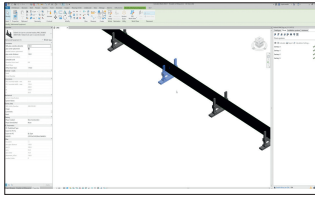

For pipe installations with a greater distance from the ceiling, we recommend using the Geberit Pluvia support set to ensure optimal safety and stability. It significantly reduces the risk of lateral vibrations or oscillations caused by the high flow velocities in Pluvia discharge systems. With the latest update, you can now add the Pluvia support set effortlessly in your next BIM project. The lateral support elements are automatically positioned according to Geberit guidelines and fully visualized within the model – saving time and ensuring compliance and is also include in the material list.

AUTOMATIC EQUAL SPACING OF BRACKETS FOR CONSISTENT AND STANDARD-COMPLIANT PIPE LAYOUTS

This new functionality evenly distributes brackets along any pipe section to ensure uniform spacing, compliance with relevant standards, and accurate material calculation. Simply enable the option in the settings, and the Pluvia Assistant will automatically apply the correct equal spacing – saving time and improving planning precision in your BIM project.

PLAN WITH THE NEW GEBERIT CAST-IN CONCRETE BRACKETS

Pipelines embedded in concrete must be securely fixed to stay in position during pouring. Geberit now offers an easy-to-install and flexible solution: the Geberit Cast-in concrete brackets made from recycled plastic.

With the new release, you can add these brackets quickly. Simply set the fastening type to "embedded in concrete" in the Properties, and the Geberit cast-in concrete brackets will be automatically placed according to the official Geberit planning rules and visualized in the BIM project.

The material list shows both the required number of brackets and their exact positions.

UPGRADE YOUR SUPERTUBE PROJECT WITH PREMIUM SOUND INSULATION

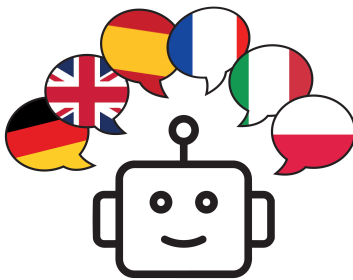

Once you have planned your project using the Geberit PE drainage system with the SuperTube system, you can easily upgrade to the highly sound-insulating Geberit Silent-db20 system.

The assistant "Silent-db20 Upseller" automatically identifies all relevant pipes and fittings in your model and seamlessly replaces them with the corresponding Silenldb20 SuperTube solutions. This enhances acoustic performance on the stack pipe while keeping the planning process effortless and efficient.

NEWS WITH THE ASSISTANT MODULE

ASK ANY QUESTION – IN ANY LANGUAGE – AND GET FAST ANSWERS

The new **"Help for BIM Plug-in – Search Assistant"** is now available and makes it easier than ever to find the information you need. Simply type your question, and the assistant will instantly guide you to the relevant pages in the planning documentation – and even provide a short summary of the content.

You can ask your questions **in any language you prefer**, even if it differs from the language set in your BIM Plug-in. The Search Assistant will always respond in the interface language of your BIM Plug-in, ensuring clear, consistent and seamless communication.

FIND THE TECHNICAL INFORMATION WITH SEARCH BE ARTICLE

The new **"Product manual search assistant"** will help you to find technical product information easier: just type the article number and the assistant will get you the link to the product information and an AI generated description about the product.
